

Lettre de motivation : MFG & PROCESS TECHNICIAN

My name is Moncef Tayoub, and I have always envisioned "How things could be better " or how things could be optimised to achieve greater efficiency and impact. My journey began with studying computer science, where I developed a solid foundation in problem-solving logic. This foundation was further strengthened during my experience as a freelance full-stack developer, where I mastered my technical skills while collaborating with clients to understand their needs and deliver effective solutions. This invaluable experience taught me the importance of translating ideas into actionable improvements.

However, my curiosity for creating meaningful enhancements truly expanded during my internship at Valeo. Stepping into the world of lean manufacturing and continuous improvement, I discovered the power of cross-functional collaboration and the impact of integrating programming solutions into industrial workflows. At Valeo, I successfully led the implementation and configuration of the EWS Software (E-Work-Station) to digitise operator documentations. This involved:

- Seamlessly integrating the software into the company's workflows, training users, and adapting business processes.

- Customising and fine-tuning the system to meet the specific needs of various departments.

This achievement not only streamlined operations but also reinforced my passion for tackling complex challenges and improving systems through innovative solutions. Today, my ambition to drive change and optimize processes has grown even stronger. I am eager to apply for a role in Manufacturing and Process Development Engineering, where I can take on new challenges, contribute to advancements, and continue refining my expertise.

Thank you for considering my application. I would welcome the opportunity to bring my dedication, problem-solving mindset, and technical skills to your team. I look forward to the possibility of discussing how I can contribute to your organisation's success.

Sincerely,

Moncef Tayoub
